DSN AI Bootcamp 2026 Project Participation – Data Analytics Track

Project Brief & Question Sheet

Project challenge: Audit the Dashboard

You have joined a retail business as a Data Analyst. Management has already received a dashboard and a set of conclusions based on the supplied dataset. Your task is to independently review the data, determine what can and cannot be trusted, correct the analysis, and produce a more reliable dashboard and set of business conclusions.

What you are expected to do.

- Review the supplied raw dataset and the existing management dashboard.
- Identify data-quality issues that could affect the reliability of the analysis.
- Clean and validate the data using appropriate analytical judgement.
- Audit the management claims and determine whether each is correct, incorrect, misleading, or cannot be determined.
- Build a corrected dashboard using either Power BI or Excel.
- Compare the original dashboard with your corrected dashboard and answer the final analysis questions.
- Submit a snapshot of your corrected dashboard together with your completed Answer & Submission Sheet.

Materials provided

- Raw retail transaction dataset
- Existing management dashboard to be audited
- Project Brief & Question Sheet
- Answer & Submission Sheet

Project resources & access

Dataset link	Click to access dataset
Management dashboard	Provided in this brief
Answer & Submission Sheet	Click to access submission sheet
Submission form	Click to access the submission form
Submission deadline	31st of September
Support contact	aicommunity@datasciencenigeria.ai
File naming	FullName_DataAnalytics_FinalProject

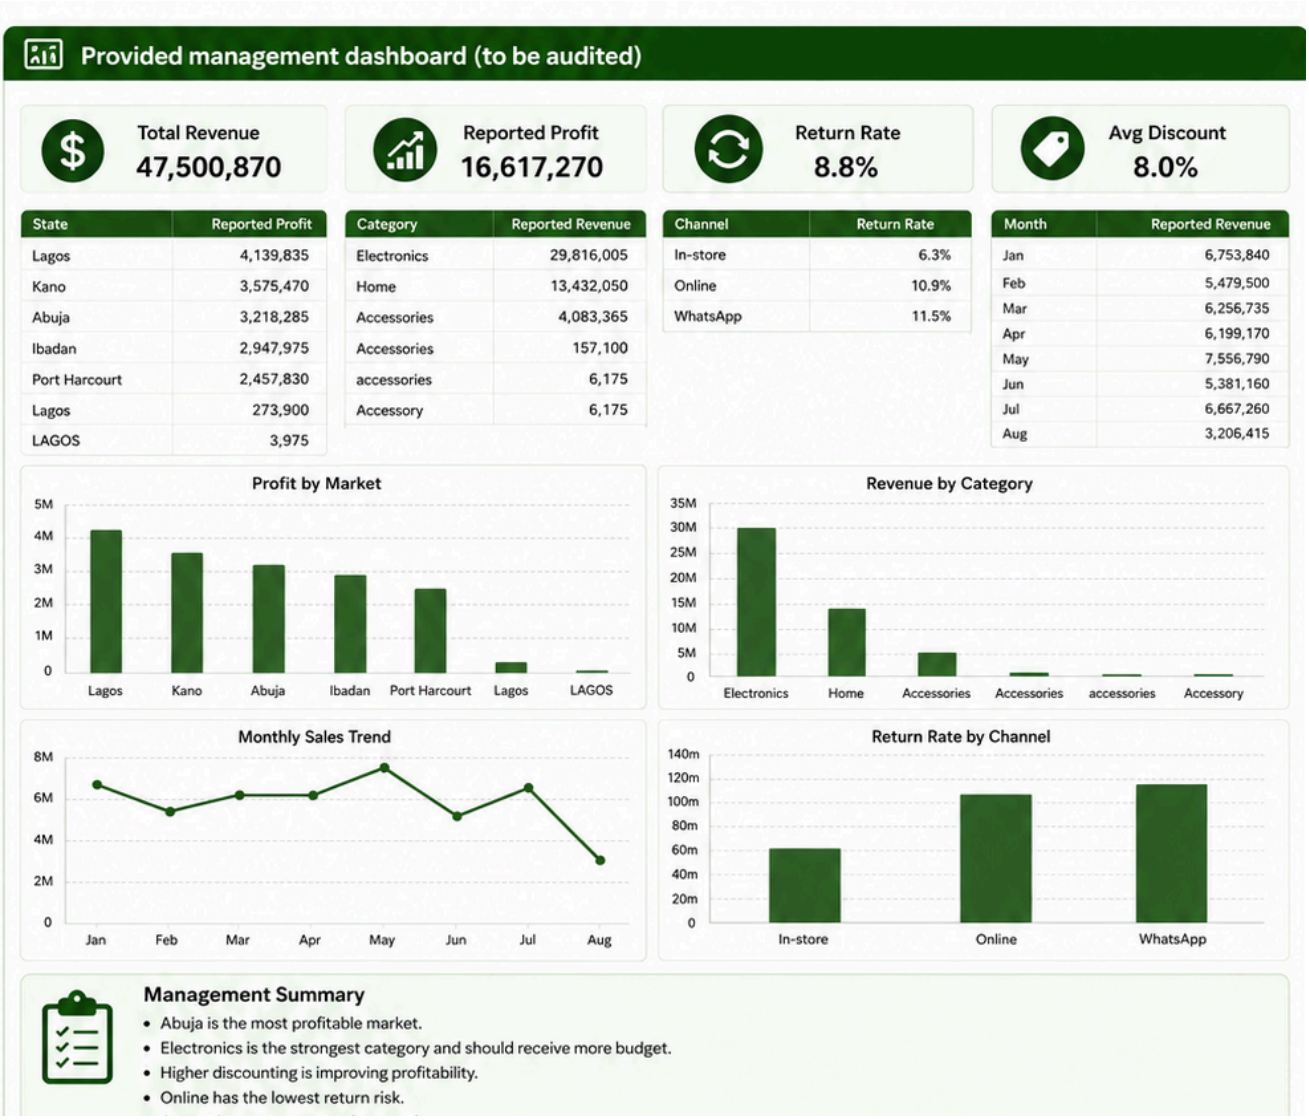

Before you begin: Make sure you can access the dataset and have either Power BI Desktop or Microsoft Excel available. Download the files before starting so you are not dependent on the submission link while working.

Important note on the dataset

Do not assume that every field, value, label, calculation, or conclusion is correct. The dataset may contain data-quality issues that require investigation. You are expected to decide what needs to be corrected and justify your decisions in the Answer & Submission Sheet.

Provided management dashboard

The dashboard below has already been presented to management. Your role is to audit it, not simply reproduce it.

Dashboard audit questions

1. Abuja is the most profitable market. Decide: Correct / Incorrect / Misleading / Cannot be determined.

2. Electronics is the strongest-performing product category and should receive more budget. Decide: Correct / Incorrect / Misleading / Cannot be determined.

3. Higher discounting is improving profitability. Decide: Correct / Incorrect / Misleading / Cannot be determined.

4. The Online channel has the lowest return rate. Decide: Correct / Incorrect / Misleading / Cannot be determined.

5. August is the strongest sales month. Decide: Correct / Incorrect / Misleading / Cannot be determined.

6. Lagos is underperforming compared with other markets. Decide: Correct / Incorrect / Misleading / Cannot be determined.

7. The reported Revenue field can be used directly for decision-making. Decide: Correct / Incorrect / Misleading / Cannot be determined.

8. The dashboard is sufficiently reliable for management to act on without further data cleaning. Decide: Correct / Incorrect / Misleading / Cannot be determined.

Your corrected dashboard

Build one corrected dashboard in either Power BI or Excel. The design is your choice, but it should be clear, readable, and focused on decision-making. Your dashboard should include the metrics and visuals necessary to support your conclusions. At minimum, your analysis should consider:

- Overall business KPIs
- Market/state performance
- Product or category performance
- Monthly performance trend
- Returns or quality-risk indicators
- Profitability and revenue where relevant

Final analysis questions

1. Which conclusion in the original dashboard was the most misleading, and why?

2. What changed most materially after you cleaned and corrected the data?

3. If management had acted on the original dashboard, what decision could have created the greatest business risk?

4. Based on your corrected analysis, what is the most important driver of business performance in this dataset?

5. What three actions should management take next based on the evidence from your corrected dashboard?

Submission requirements

- A snapshot of your corrected dashboard is acceptable.
- A completed Answer & Submission Sheet containing your data-cleaning review, dashboard audit responses, and final five answers.
- You do not need to submit the original dashboard again.

- Keep your working Excel or Power BI file available. It may be requested for verification if necessary.
- Figures stated in your written responses must match your corrected dashboard.

Use of AI tools

AI tools may be used as support, but they do not replace your analytical responsibility. Your final calculations, cleaning decisions, interpretations, and recommendations must be supported by the supplied dataset. Unsupported or internally inconsistent responses may lose marks.

Assessment

Assessment area	Weight
Data cleaning and reliability	20%
Dashboard audit and claim review	25%
Quality of corrected dashboard	25%
Comparison, explanation and reasoning	20%
Practical recommendations	10%

Think like an analyst: challenge the data, verify the story, and communicate what the evidence actually supports.
